

Download Homeostasis Cell Transport Study Guide

Answers

Homeostasis. According to the Centers for Disease Control and Prevention, there are almost 26 million people in the United States alone that have diabetes, which is 8.3% of the total U.S. population. The nucleus of the cell acts like the control center, storing the information needed for the cell to do everything it needs to do. This lesson will discuss how that information is stored and used. Fluid and electrolyte balance is a dynamic process that is crucial for life and homeostasis. Fluid occupies almost 60% of the weight of an adult.; Body fluid is located in two fluid compartments: the intracellular space and the extracellular space.; Electrolytes in body fluids are active chemicals or cations that carry positive charges and anions that carry negative charges.
